--	---

Introduction:

At **Bid Auctioneer's**, we specialize in providing state-of-the-art software solutions tailored to meet the diverse needs of businesses. With our flagship product, **Bid Auctioneer's**, we aim to revolutionize your auction processes, offering **Forward Auction Software** under our esteemed brand.

Solution Overview:

Bid Auctioneer's Forward Auction Software is meticulously crafted to empower organizations like yours with streamlined auction management capabilities. Below, we present a detailed breakdown of the features and technologies we used in software solutions:

Technologies Used:

The application utilizes the following technologies:

- **.NET Framework/.NET Core:** The core framework for building the application, offering a rich set of libraries and tools for development.
- **C#:** The primary programming language used for coding logic and business functionalities.
- **Entity Framework (EF):** An ORM (Object-Relational Mapping) framework for interacting with the database, providing a higher level of abstraction for database operations.
- **SQL Server 2019:** Relational database management systems used for storing proposal data and related information. The choice of database system can be tailored based on client requirements and scalability considerations.
- **HTML/CSS/JavaScript:** For designing and developing the frontend user interface, ensuring a responsive and interactive user experience.

Technologies Beyond Imagination

- **JQuery/AJAX:** Used for client-side scripting and asynchronous communication with the server, enhancing the responsiveness of the application.
- **Bootstrap:** A frontend framework for creating responsive and mobile-first websites, ensuring consistent styling and layout across different devices.
- **JSON/XML:** For data interchange between the client and server, enabling efficient transmission and processing of proposal-related data.
- **SMTP/IMAP Protocol:** For sending and receiving emails, enabling the application to deliver proposals to clients directly from within the interface and handle responses or acknowledgments.
- **Authentication and Authorization:** Implementing secure user authentication and authorization mechanisms using ASP.NET Identity or similar frameworks to ensure data privacy and access control.
- **Dependency Injection (DI):** Utilizing DI container Microsoft. Extensions. Dependency Injection for managing object dependencies and promoting modular, maintainable code.

Software Features:

Admin Panel Feature		
<p>Customer Management</p> <ul style="list-style-type: none"> ✓ New Customer Approval Request ✓ View General Registered Customers List ✓ View KYC Approved Customers List ✓ View In-Eligible Customers List and Remark ✓ Free and Paid Membership Provision ✓ Approve/Block Customer List 	<p>Event Management</p> <ul style="list-style-type: none"> ✓ Create New Event ✓ Upcoming Event List ✓ Running Event List ✓ Closed Event List ✓ Empty Event List ✓ Decision Taken ✓ All Events History ✓ View Customer Participation List event wise ✓ Auto Increment/Manual Pricing Option ✓ Auto Time Extension Feature ✓ Generate H1 Report 	<p>Master Setting</p> <ul style="list-style-type: none"> ✓ Company Setup ✓ Department Master ✓ Role & Permissions ✓ Employee ✓ Mail Template ✓ Mail Configuration ✓ Country Master ✓ State Master ✓ Region Master ✓ UOM Master ✓ Event Mode Master
